ABOUT ME

I am web developer with 3 years of experience mostly as a front-end developer. I blend creativity and precision to build engaging, efficient user experiences. Fast learner with the ability of self-learning. I love to explore new technologies and am passionate about problem-solving.

WORK EXPERIENCE

- Combridge** 09/2023 - PRESENT
Front-End Developer, Servicenow Developer
 - Develop and manage a ServiceNow customer portal using Angular.js and Bootstrap.
 - Implement internal product workflows such as ordering and service management.
 - Build an API enabling other teams to use multiple customer solutions.
 - Integrate third-party services to streamline operations and sync data across computer network systems.
- Minyma Technologies** 12/2021 - 08/2023
Front-End Developer
 - Develop a community marketplace for buying and selling NFTs on Ethernet with features such as video streaming and chat.
 - Compose different parts of the application with the help of micro-frontends.
 - Use web3 to build and interact with smart contracts on the Ethereum blockchain.
 - Develop an AI-assisted learning tool, that summarizes documents, takes bullet-point notes, offers semantic search and has a question-answering feature.
 - Build a text editor for organizing and formatting notes associated with different documents.
 - Leverage the power of websockets for getting real-time updates within the application.
 - Make key decisions about architectural choices both in front-end and back-end
- minic studio** 07/2020 - 09/2020
Front-End Developer, summer internship
 - Design and develop a traveling web application for searching famous places, planning your stays and saving places to visit.
 - Identify the problem the application will solve and define the target audience.
 - Define the Minimum Viable Product (MVP) features
 - Create a product backlog with user stories and prioritize them based on impact and effort.
